ABOUT ME

I'm Bilal Shahzad, a dedicated Dynamics 365 developer passionate about solving problems and improving business processes. I specialize in ERP customizations and have designed mobile apps, blending technical development with strong UI/UX design skills using Figma. My commitment is to deliver clean, reliable solutions that drive efficiency and enhance user experiences.

WORK EXPERIENCE

Associate Technical Consultant, Tribbox

Oct 2025 - Present

- As an Associate Technical Consultant, I focused on backend development in Business Central, designed mobile applications with strong UI/UX principles, developed custom Odoo ERP solutions across multiple industry verticals, and gained experience customizing Dynamics 365 F&O components to support business processes.

Intern Technical Consultant, Tribbox

July 2025 - Sept 2025

- During my internship, I learned to develop and customize Dynamics 365 F&O components using X++ and AOT objects, applying Microsoft's best practices and design patterns.
-

PROJECTS

Designed Mobile Apps

Designed a comprehensive SIS App (Inventory Management) featuring sales processings, purchase receiving, purchase returns, and many more functionalities. I also designed a HRMS App, applying the same focus on functionality all crafted with Figma for a seamless UX.

POS Backend Project

Developed a custom backend system for a retail POS App in Business Central using AL, including API integrations, store and warehouse management, automated sales posting, transaction synchronization, and much more.

Customizations

Customized and developed D365 F&O components including tables, forms, extensions, data entities, batch jobs, number sequences, and X++ business logic to support business requirements.

Odoo Development

Engineered and launched a high-impact suite of Odoo 19 vertical solutions covering Hospitality (POS), Healthcare (HMS/Dental), and Supply Chain Logistics (Freight Forwarding). Extended Odoo base models via inheritance, seamlessly driving custom business logic directly into core frameworks including sale, account, hr, and stock.

Ecommerce Website

Designed and built a live jewellery e-commerce website from scratch using React — handling product management, cart logic, a multi-step checkout, and real-time order notifications via WhatsApp. Currently serving real customers in Pakistan. [Visit Website](#)

Sales Brain

Built Sales Brain, an AI-powered sales call intelligence platform (Next.js, TypeScript, Prisma) that transcribes and analyzes sales calls using Groq's Whisper/LLaMA models, delivering coaching insights, pipeline analytics, and one-click CRM sync (HubSpot/Salesforce). Implemented secure multi-provider auth, team workspaces, and role-based access control end-to-end.

- **HRMS App**

Built a full-featured HR management web app in React and TypeScript with modules for employee directory, attendance, leave management, and an interactive analytics dashboard.

- **Booking Platform**

Built a multi-tenant booking platform (Vue 3, TypeScript, Pinia) with real-time admin calendar and customer self-booking flow.

EDUCATION

2020 - 2024

Bachelor of Science in Computer Science NCBA&E

2020

Intermediate in FSC Pre Engineering The Crescent College

2018

Matric St. Anthony High School

2023

Full Stack Web Development Course Ideoversity
